

AMENDMENTS TO THE SPECIFICATION

Please substitute the following paragraph for the corresponding paragraph of the originally filed application:

The first full paragraph on page 5 of the specification:

--A pair of mounting grooves 14 are formed at opposing locations on the side of the lower stage 6. When the dermabrasion tip 2 is inserted into the housing 10, the dermabrasion tip 2 is installed at a predetermined position by engaging a pair of pins 12 with the mounting grooves 14. Preferably, as shown in FIG. 4, the dermabrasion tip 2 is mounted at a position where its upper stage protrudes from the hollow of the housing. At the position, the dermabrasion tip 2 is biased upward by the resilient force of the spring 16. When the hand piece is depressed against patient's skin, the abrasive surface 8 [[2]] of the dermabrasion tip 2 becomes to contact with the skin and the dermabrasion tip 2 is depressed into the housing as shown in FIG. 5. As the pins 12 are engaged with the mounting grooves 14 to allow sliding motion, the dermabrasion tip 2 may move into the hollow when depressed against skin.--
